

AZURE BLOB STORE AND READ LIST

Fetch names of all new or updated blobs

Fetch blobs whose names were previously fetched

Created by Marcus Vega

KEY ATTRIBUTES

- `ListAzureBlobStorage` : Pulls names of blobs from a previously-specified Microsoft Azure Blob Storage.
 - All pulled names refer to blobs which have been modified or newly added since the last time the names were pulled.
 - Each name is referenced in its own flowfile.
- `FetchAzureBlobStorage` : Pulls blobs from Azure storage container.
 - The name of the blob is referenced by some attribute in flowfile.
 - The attribute which holds the blob name by default is `${azure.blobname}`

NOTES

- The following items are required for this template to work:
 - Azure Container Name
 - Azure Storage Account Name
 - Azure Storage Account Key (if needed to access storage account)
