

INVOKE TC EMAIL WEBSERVICE

Invokes TC Wrapper Email API service

Gets response from Service indicating success or failure

Created by Mohammed Nadeem

KEY ATTRIBUTES

- `GenerateFlowFile`: Creates email payload to be sent
- `InvokeHTTP`: Triggers TC Wrapper Email API by passing payload
- `LogAttribute`: Logs and terminates the response fetched from Wrapper service

NOTES

- Use this template for invoking email service when you want send emails to outlook server.
- Client invokes TC instance wrapper service which in turn invokes Akana service for sending mail
