

## INVOKE SOAP WEBSERVICE

*Expose an API that takes XML input*

*Call a SOAP webservice, then return response to API client*

*Created by Aamir Ali*

### KEY ATTRIBUTES

- `HTTPHandleRequest`, `HttpHandleResponse`: Create a Jetty server that listens on a port and receives/response to client requests
- `InvokeHTTP`: Processor is used to invoke external API's
- `TransformXML` : Can be used for XML transformations using XSLT

### NOTES

- *Use this template as a starting point for understanding how to invoke external webservice API's, in this particular case a SOAP WSDL webservice.*
