

## SALESFORCE API TEMPLATE

*Get a customer-specific salesforce auth token and url, then cache it.*

*Call a Salesforce API using the auth token and url from a cache.*

*Created by Aamir Ali*

### KEY ATTRIBUTES

- `EvaluateJSONPath`: Use JSONPath expressions to get data from JSON objects.
- `InvokeHTTP`: Processor is used to invoke external API's
- `ReplaceText`: Replace the content of a flowfile.
- `PutDistributedMapCache`: Put a key/value pair in a `DistributedMapCache`
- `FetchDistributedMapCache`: Get a value from cache based on key.

### NOTES

- *Use this template as a starting point for understanding how to authenticate with Salesforce, then invoke Salesforce API's for various objects using JSON requests.*
